

**METHOD FOR ATTRACTING GAME ANIMALS
USING GENETICALLY ENGINEERED PLANTS**

ABSTRACT OF THE DISCLOSURE

The present invention provides a method of attracting game animals using genetically altered plants. The method involves packaging seeds for plants such as soybeans, corn canola and other plant species, which have been genetically engineered to make them resistant to the use of broad spectrum herbicides. The purchaser then plants
5 the seed in a food plot adjacent to the area where he desires to attract game animals. Once the seeds have germinated, the food plot is sprayed with a broad spectrum herbicide in order to kill the weeds and improve the yield of the desired plants.
